	1. Full load, Measured by 20 MHz bandwidth oscilloscope and the output paralleled a 0.1uF ceramic capacitor and a 10uF electrolytic capacitor. 2. L 25 °c ±10 °c ambient temperature, input voltage changes from 100Vac to 277Vac. 3. L 25 °c ±10 °c ambient temperature, 277Vac input, load changes from 50% to 100% 4. The overcurrent protection value shall not exceed 2.7times of the maximum load. 5. When the output voltage is over 110~140% Rated Load Voltage, the driver shuts off automatically and enters protection status. The driver will work normally after fault condition removed and AC input re-apply.
